Sanitary-A
Acetic Cure Anti-Fungal
Silicone Adhesive / Sealant

Description
SA Sanitary-A Silicone Sealant is a one part, 100% acetic curing adhesive / sealant containing anti-fungicide to prevent mould growth. It resists mildew when exposed to prolonged hot and humid environments and is suitable for sealing in kitchens, vanities, bathrooms, shower screens and any other wet area application.

Key performance Properties
- Non Slump
- Acetic Cure
- Mildew Resistant
- One Part Ready To Use
- Outstanding Weatherability
- Excellent Adhesion
- Excellent Uv Resistance
- 5 Star Voc Compliant

Applications
SA Sanitary-A has excellent adhesion to glass, ceramics, aluminium, masonry and stone. Useful for grouting and bedding some ceramic tiles and sealing around bathroom fixtures. It may be used for general glazing and weatherproofing applications including wet areas and humid environments.

Specifications
Typical data values should not be used as specifications. Please contact Sealants Australasia for further information. A thin bead of sealant will tolerate more movement than a thick bead. Joint width and depth should be no less than 4 mm. Maximum joint widths should not exceed 25mm. Joint depths should be half the width, with a maximum depth of 10mm. Polyethylene closed cell foam rod is the recommend backing material to provide the correct depth of joint. If the joint is too shallow, use a polyethylene tape bond breaker. Do not allow the silicone sealant to contact the back of the joint or any staining materials.

Sanitary-A
Acetic Cure Anti-Fungal Silicone Adhesive / Sealant

Application
Cut nozzle at 45 Degree angle to desired bead width, and apply to substrate with sealant gun and tool within 5 minutes. Uncured sealant can be cleaned up with mineral turpentine. Some surfaces may need a primer. If so, allow primer to dry before applying sealant. Use approved backing material for joints over 10mm deep. For a neat appearance to the joint, use masking tape. Always remove masking tape before sealant has skinned over.

Surface preparation
Surfaces must be clean, dry and free of dirt, grease, oil, rust and water. Use white spirits or mechanical cleaning with a lint free cloth. Do not use soap or detergent. For plastics, contact Sealants Australasia for a recommended cleaning solvent. When used on remedial work all existing sealant must be removed prior to application of new material.

Packaging
300gm Cartridges - Available in cartons of 20. Product Packed in Australia.

Storage/Shelf life
The shelf life of SA Sanitary-A Silicone Sealant is 12 months if stored in a cool dry place. The storage temperature should not exceed 25°C as this will decrease shelf life.

Health and safety
This product emits Acetic Acid whilst curing. Use in well ventilated area and avoid breathing in vapour. Avoid contact with skin, eyes and mouth. If in eyes, immediately flush with water for 15 minutes. If irritation persists seek medical attention. Remove contact lenses before using sealant. Do not handle lenses until all sealant has been removed from fingertips and nails. Residual sealant may remain on fingers for several days and transfer to lenses and cause eye irritation. Avoid contact with skin and clothing. MSDS available on request. KEEP OUT OF REACH OF CHILDREN.

Limitations
SA Sanitary-A is not for use on aquariums as leaching of the fungicide can occur. Not for use on surfaces with special coatings, such as mirrors, without approval of the manufacturer. Sanitary-A silicone sealant should not be applied or used on wet, damp, frozen or contaminated surfaces. Do not use on submerged joints where porous substrates permit water to the bond interface. Cannot be painted, as paint will not adhere to sealant. Not for use on some laminated glass or certain rubber products where bleeding of plasticiser may occur.

Sanitary Volume Calculator
Number of 300gm Cartridges = Joint Width (mm) x Joint depth (mm) x Joint length (m) x 1.15* ÷ 292
* Please note: 1.15 Allows for 15% wastage. Joints are assumed rectangular
